Upon the certificates and information we have from the manufacturer, Solchem Nature SLU states that the product Megaflora 9 is manufactured using the following technologic ingredients as support for the stability of the bacterial strains: corn starch, maltodextrins, corn inulin, potassium chloride, magnesium sulphate, fructo-oligosaccharides, amylases, vanilla and manganese sulphate.

Processing technologic ingredients are exempt from the mandatory inclusion in the list of ingredients, as indicated in Article 20 of Regulation (EU) No 1169/2011 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 25 October 2011, as well as its consideration in the mandatory nutrition information as indicated Annex I of this Regulation.

They would have to be declared if they were allergenic substances, which is not the case, declared in Annex II of the Regulation.

In conclusion, the inclusion of these technical ingredients in the composition of the product is not necessary.
