Statement: *Megaflora 9 can used safe in Food and Food Supplements*

On December 2004 the EFSA (European Food Safety Authority) published a document in which probiotics were recognised as QPS, Qualified Presumption of Safety, for their employment in human food and animal feed supply.

This qualification was granted to all microorganisms classified in category C, which defines those microorganisms traditionally used and that are identifiable at the level of bacterial strain.

The strains present in Megaflora 9 are characterized strains identified and registered in the NIZO (The Netherlands Institute for Dairy Industry Ede), an official Centre where strains used by the food industry, which meet the characteristics defined for category C, are deposited.

Megaflora 9 is used as an ingredient in formulations that can be supplied in capsules, sticks and sachets or in powder to be diluted.
